Application/Control Number: 95/002,095

Art Unit: 3992

Right of Appeal Notice

An Action Closing Prosecution mailed 05/01/2013. No Patent Owner response has been

received.

As summarized in the ACP (05/01/2013), which is hereby incorporated by reference:

(ACP, p. 43) Claims 1-2, 4-15, 18-19, 20-21, 23-34, 37-38, and 83-84 are finally rejected under

102(b) as anticipated by Ogaki.

The rejections of claims 3, 16, 17, 22, 35, 36, 39-57, and 58-78 under 102(b) as anticipated

by Ogaki are withdrawn.

(ACP, p. 61) Claims 79-80 & 83-84 are rejected under 35 USC 102(b) as anticipated by Bowen

1991. There are no proposed rejections for new claims 81-82 and 85-86 based on Bowen 1991

(as there are no rejections for parent independent claims 39 and 58).

Claims 1-2, 4-11, 19-21, 23-30, 38, 79-80 and 83-84 are finally rejected under

35 U.S.C. § 102(b) over <u>Bowen 1991</u>.

(ACP, p. 80) Claims 1, 2, 4, 5, 8, 12, 13, 15, 18, 20, 21, 23, 24, 27, 31, 32, 34, 37, 79-80 and 83-

84 are finally rejected under 35 U.S.C. § 102(b) over the Grube '067 patent.

Application/Control Number: 95/002,095

Page 3

Art Unit: 3992

Claims 39, 40, 42, 43, 46, 50, 51, 53, 56, 58, 59, 61, 62, 65, 69, 70, 72, 75, 81-82 and 85-86 are finally rejected under 35 U.S.C. § 103(a) over the Grube '067 patent in view of HTML.

(ACP, p. 81) **The following claims are confirmed** (withdrawn from rejection as anticipated by Ogaki and not proposed for rejection as anticipated by Bowen 1991 or Grube '067, or the obvious combination of Grube '067 and HTML):

Claims 3, 16, 17, 22, 35, 36, 41, 44, 45, 47, 48, 49, 52, 54, 55, 57, 60, 63, 64, 66, 67, 68, 71, 73, 74, 76, 77, and 78 are confirmed.

The reasons for confirmation are explicit in the ACP (05/01/2013).

Rejections, as stated in the ACP, are maintained in this RAN office action.

Examiner suggests that Patent Owner may choose to amend what appears to be a clear omission in claim 36: "The software product as set forth in claim 20 wherein the communications network is the Internet."

Information Disclosure Statement

IDS received 06/03/2013, 06/25/2013, and 07/02/2013 has been entered into the record. "With respect to the **Information Disclosure Statements** (PTO/SB/08A and 08B or its equivalent) considered with this action, the information cited has been considered as described in the MPEP. Note that MPEP 2256 and 2656 indicate that degree of consideration to be given to such information will be normally limited by the degree to which the party filing the information

Application/Control Number: 95/002,095

Art Unit: 3992

citation has explained the content and relevance of the information. A concise explanation of the

relevance, as it is presently understood by the individual designated in § 1.56(c) most

knowledgeable about the content of the information, of each patent, publication, or other

information listed that is not in the English language may be either separate from applicant's

specification or incorporated therein.

Relevant Litigation

The patent owner is reminded of the continuing responsibility under 37 CFR 1.565(a), to apprise

the Office of any litigation activity, or other prior or concurrent proceeding throughout the

course of this reexamination proceeding. See MPEP §§ 2207, 2282 and 2286. Pursuant to 37

CFR 1.985(a), the patent owner in an inter partes reexamination proceeding must promptly

notify the Office of any Federal Court decision involving the patent. Upon the issuance of a

holding of claim invalidity or unenforceability by a Federal Court, reexamination of those claims

will continue in the Office until the decision becomes final. MPEP 2686.04

This inter partes reexamination (95/002095, USPN 6658644 B2 to Reisman) is related to inter

partes reexamination 95/002093 (USPN 6,557,054 to Reisman), in which all claims under

reexamination are rejected.

Extensions of Time

Extensions of time under 37 CFR 1.136(a) will not be permitted in these proceedings because the

provisions of 37 CFR 1.136 apply only to "an applicant" and not to parties in a reexamination

Application/Control Number: 95/002,095

Art Unit: 3992

proceeding. Additionally, 35 U.S.C. 314(c) requires that inter partes reexamination proceedings

"will be conducted with special dispatch" (37 CFR 1.937). Patent owner extensions of time in

inter partes reexamination proceedings are provided for in 37 CFR 1.956. Extensions of time are

not available for third party requester comments, because a comment period of 30 days from

service of patent owner's response is set by statute. 35 USC 314(b)(3).

Service of Papers

Any paper filed with the USPTO, i.e., any submission made, by either the Patent Owner or the

Third Party Requester must be served on every other party in the reexamination proceeding,

including any other third party requester that is part of the proceeding due to merger of the

reexamination proceedings. As proof of service, the party submitting the paper to the Office must

attach a Certificate of Service to the paper, which sets forth the name and address of the party

served and the method of service. Papers filed without the required Certificate of Service may be

denied consideration. 37 CFR 1.903; MPEP 2666.06.

Conclusion

This is a RIGHT OF APPEAL NOTICE (RAN); see MPEP § 2673.02 and § 2674. The decision

in this Office action as to the patentability or unpatentability of any original patent claim, any

proposed amended claim and any new claim in this proceeding is a FINAL DECISION. No

amendment can be made in response to the Right of Appeal Notice in an *inter partes*

reexamination. 37 CFR 1.953(c). Further, no affidavit or other evidence can be submitted in an

Application/Control Number: 95/002,095

Page 6

Art Unit: 3992

inter partes reexamination proceeding after the right of appeal notice, except as provided in 37

CFR 1.981 or as permitted by 37 CFR 41.77(b)(1). 37 CFR 1.116(f).

Each party has a thirty-day or one-month time period, whichever is longer, to file a notice of

appeal. This time period may not be extended. 37 CFR 41.61(e). The patent owner may appeal

to the Board of Patent Appeals and Interferences with respect to any decision adverse to the

patentability of any original or proposed amended or new claim of the patent by filing a notice of

appeal and paying the fee set forth in 37 CFR 41.20(b)(1). The third party requester may appeal

to the Board of Patent Appeals and Interferences with respect to any decision favorable to the

patentability of any original or proposed amended or new claim of the patent by filing a notice of

appeal and paying the fee set forth in 37 CFR 41.20(b)(1).

In addition, a patent owner who has not filed a notice of appeal may file a notice of cross appeal

within fourteen days of service of a third party requester's timely filed notice of appeal and pay

the fee set forth in 37 CFR 41.20(b)(1). A third party requester who has not filed a notice of

appeal may file a notice of cross appeal within fourteen days of service of a patent owner's

timely filed notice of appeal and pay the fee set forth in 37 CFR 41.20(b)(1).

Any appeal in this proceeding must identify the claim(s) appealed, and must be signed by the

patent owner (for a patent owner appeal) or the third party requester (for a third party requester

appeal), or their duly authorized attorney or agent.

Any party that does not file a timely notice of appeal or a timely notice of cross appeal will lose

the right to appeal from any decision adverse to that party, but will not lose the right to file a

respondent brief and fee where it is appropriate for that party to do so. If no party files a timely

Application/Control Number: 95/002,095

Art Unit: 3992

appeal, the reexamination prosecution will be terminated, and the Director will proceed to issue

and publish a certificate under 37 CFR 1.997 in accordance with this Office action.

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- 2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
- 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- 2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a
 request involving an individual, to whom the record pertains, when the individual has requested assistance from the
 Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
- 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a
 request involving an individual, to whom the record pertains, when the individual has requested assistance from the
 Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
- 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

$\begin{array}{c} 7873 \\ \textbf{BRETT GALLOWAY - 5/8/2013} \end{array}$

		98			100
01:48:57	1	innovation was relatively limited. And in practice	01:51:36	1	And and so, you know, you know, the idea
01:49:01	2	even beyond that, you know, if there was innovation,	01:51:41	2	there being if you have you know, if you want to
01:49:04	3	it was almost always by our SE's, our system	01:51:43	3	be able to sell different levels of service, you have
01:49:09	4	engineers, who with sort of complicated installations	01:51:46	4	to have some ability to enforce those different
01:49:12	5	would tend to get involved, you know, if they were	01:51:48	5	levels of service because otherwise there is no basis
01:49:15	6	bigger customers and who obviously had more	01:51:50	6	to charge one person more than the next person. And
01:49:18	7	knowledge of the product and more ability to know,	01:51:54	7	over time people become aware if there is no
01:49:21	8	you know, what the range of configuration items were,	01:51:57	8	enforcement they become aware that there is no
01:46:23	9	you know, that they could, that they could draw from	01:51:59	9	enforcement and they cheat. Or they don't even
01:49:26	10	to solve a particular customer problem.	01:52:04	10	cheat. They actually just buy the lowest level of
01:49:28	11	So, you know, so the final answer to your	01:52:07	11	service and they get whatever they get the service
01:49:31	12	question is I you know, a PacketShaper of an	01:52:09	12	that they wanted.
01:49:34	13	earlier era might or might not have, you know	01:52:11	13	So MCI's core problem was a business problem,
01:49:38	14	probably either would have just worked or not worked	01:52:15	14	which is justifying higher price points.
01:49:42	15	because it had a sufficient number of features to	01:52:17	15	Q. Do you know whether MCI considered a pre-mid
01:49:45	16	satisfy their use case or not.	01:52:25	16	'98 PacketShaper product as a solution to allocate
01:49:47	17	Q. MR. ZOLOTOREV: So it's possible that a	01:52:30	17	shared wireless bandwidth on its network?
01:49:48	18	pre-'98 PacketShaper would not have worked at all in	01:52:34	18	A. I don't know. You know, what I can say is,
01:49:52	19	a wireless	01:52:36	19	you know, that use case the basic use case I
01:49:55	20	A. Well, in their particular in their	01:52:39	20	described was a pretty simple use case, all right,
01:49:57	21	particular application which, again, was a bunch of	01:52:45	21	where you have a bunch of subscribers and you're
01:50:00	22	stuff, some of which, you know, was specifically	01:52:48	22	basically just trying to partition bandwidth between
01:50:03	23	about the wireless the fact that it's wireless,	01:52:53	23	them.
01:50:07	24	and I'm sure there were other aspects of the of	01:52:54	24	All right. So that use case would have been,
01:50:10	25	product requirements that were just aspects of their 99	01:52:56	25	you know, constructively enabled by the PacketShaper
01:50:10	25		01:52:56 01:53:00	25	
		99			103
01:50:12	1	99 own business architecture, you know, how they define	01:53:00	1	103 once we introduced the partition feature.
01:50:12 01:50:17	1 2	99 own business architecture, you know, how they define services, how they define pricing, you know, how they	01:53:00 01:53:03	1 2	once we introduced the partition feature. Q. When was that?
01:50:12 01:50:17 01:50:20	1 2 3	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above	01:53:00 01:53:03 01:53:04	1 2 3	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I
01:50:12 01:50:17 01:50:20 01:50:25	1 2 3 4	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network.	01:53:00 01:53:03 01:53:04 01:53:14	1 2 3 4	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99.
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26	1 2 3 4 5	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17	1 2 3 4 5	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26	1 2 3 4 5	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22	1 2 3 4 5	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32	1 2 3 4 5 6	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22	1 2 3 4 5 6	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically,
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32	1 2 3 4 5 6	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with,	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30	1 2 3 4 5 6 7 8	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32 01:50:37	1 2 3 4 5 6 7 8 9	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30	1 2 3 4 5 6 7 8	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers.
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32 01:50:37 01:50:42	1 2 3 4 5 6 7 8 9	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct?	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33	1 2 3 4 5 6 7 8 9 10	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32 01:50:37 01:50:42 01:50:47	1 2 3 4 5 6 7 8 9	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form.	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:36	1 2 3 4 5 6 7 8 9	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:32 01:50:37 01:50:42 01:50:47 01:50:50	1 2 3 4 5 6 7 8 9 10 11 12	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:36 01:53:39 01:53:41	1 2 3 4 5 6 7 8 9 10 11 12	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32 01:50:37 01:50:42 01:50:47 01:50:50 01:50:51	1 2 3 4 5 6 7 8 9 10 11 12 13	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCT's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product it's entirely possible the pre-'98 product	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:39 01:53:41 01:53:43	1 2 3 4 5 6 7 8 9 10 11 12 13	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32 01:50:37 01:50:42 01:50:47 01:50:50 01:50:55 01:50:55	1 2 3 4 5 6 7 8 9 10 11 12 13 14	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product would just not have met their requirements. You	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:36 01:53:41 01:53:43 01:53:47	1 2 3 4 5 6 7 8 9 10 11 12 13	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32 01:50:37 01:50:42 01:50:47 01:50:50 01:50:55 01:51:00 01:46:24	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product it's entirely possible the pre-'98 product would just not have met their requirements. You know, the thing I would add on top of that is that	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:36 01:53:41 01:53:43 01:53:47 01:53:52	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition and then we would manage bandwidth to that partition
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:32 01:50:37 01:50:42 01:50:47 01:50:50 01:50:51 01:50:55	1 2 3 4 5 6 6 7 8 9 10 11 12 13 14 15 16	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product would just not have met their requirements. You know, the thing I would add on top of that is that those requirements would be, you know, a composite of	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:36 01:53:41 01:53:41 01:53:43 01:53:47 01:53:52 01:53:55	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition and then we would manage bandwidth to that partition envelope. And then within that partition we could
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:32 01:50:37 01:50:47 01:50:47 01:50:50 01:50:51 01:50:55 01:51:00 01:46:24 01:51:08	1 2 3 4 5 6 6 7 8 9 10 11 12 13 14 15 16 17	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product it's entirely possible the pre-'98 product would just not have met their requirements. You know, the thing I would add on top of that is that those requirements would be, you know, a composite of features they needed around, you know, the wireless	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:36 01:53:39 01:53:41 01:53:41 01:53:47 01:53:52 01:53:55	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition and then we would manage bandwidth to that partition envelope. And then within that partition we could then also we could also provide secondary policy control. Q. Can you state with any more specificity as to
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:32 01:50:37 01:50:47 01:50:50 01:50:51 01:50:55 01:51:00 01:46:24 01:51:05 01:51:08	1 2 3 4 5 6 6 7 8 9 10 11 12 13 14 15 16 17 18	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product would just not have met their requirements. You know, the thing I would add on top of that is that those requirements would be, you know, a composite of features they needed around, you know, the wireless part of their network and features they needed	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:36 01:53:39 01:53:41 01:53:41 01:53:47 01:53:52 01:53:55 01:53:58	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition and then we would manage bandwidth to that partition envelope. And then within that partition we could then also we could also provide secondary policy control. Q. Can you state with any more specificity as to when the partition feature was introduced?
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:32 01:50:37 01:50:47 01:50:50 01:50:51 01:50:55 01:51:00 01:46:24 01:51:05 01:51:08 01:51:10	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product it's entirely possible the pre-'98 product would just not have met their requirements. You know, the thing I would add on top of that is that those requirements would be, you know, a composite of features they needed around, you know, the wireless part of their network and features they needed around, you know, other aspects of their both of	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:36 01:53:39 01:53:41 01:53:43 01:53:47 01:53:52 01:53:55 01:53:55 01:53:55	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition and then we would manage bandwidth to that partition envelope. And then within that partition we could then also we could also provide secondary policy control. Q. Can you state with any more specificity as to when the partition feature was introduced? A. No, I just unfortunately I wish I
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:32 01:50:37 01:50:42 01:50:47 01:50:50 01:50:51 01:50:55 01:51:00 01:46:24 01:51:05 01:51:08 01:51:14	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product it's entirely possible the pre-'98 product would just not have met their requirements. You know, the thing I would add on top of that is that those requirements would be, you know, a composite of features they needed around, you know, the wireless part of their network and features they needed around, you know, other aspects of their both of their network, wire network, as well as just around	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:39 01:53:41 01:53:43 01:53:47 01:53:52 01:53:55 01:53:55 01:53:58	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition and then we would manage bandwidth to that partition envelope. And then within that partition we could then also we could also provide secondary policy control. Q. Can you state with any more specificity as to when the partition feature was introduced? A. No, I just unfortunately I wish I could, actually.
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:32 01:50:37 01:50:47 01:50:47 01:50:50 01:50:51 01:50:55 01:51:00 01:46:24 01:51:05 01:51:08 01:51:18	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product would just not have met their requirements. You know, the thing I would add on top of that is that those requirements would be, you know, a composite of features they needed around, you know, the wireless part of their network and features they needed around, you know, other aspects of their both of their network, wire network, as well as just around features they needed to build a service.	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:39 01:53:41 01:53:41 01:53:43 01:53:52 01:53:55 01:53:55 01:53:56 01:54:00 01:54:01 01:54:01	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition and then we would manage bandwidth to that partition envelope. And then within that partition we could then also we could also provide secondary policy control. Q. Can you state with any more specificity as to when the partition feature was introduced? A. No, I just unfortunately I wish I could, actually. Q. Can you so
01:50:12 01:50:17 01:50:20 01:50:25 01:50:26 01:50:28 01:50:32 01:50:37 01:50:47 01:50:50 01:50:55 01:50:55 01:51:00 01:46:24 01:51:05 01:51:10 01:51:11	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	own business architecture, you know, how they define services, how they define pricing, you know, how they architected the wire line network, you know, above the wireless network. Q. Okay. I'm sorry. I'm going to repeat my question just because I think we spoke over each other. It's entirely possible that the pre-mid '98 PacketShaper product would not have worked with, let's say, MCI's wireless network for the purpose of allocating wireless bandwidth, correct? MS. DECAIRE: Object to the form. THE WITNESS: It is correct that the pre-'98 product would just not have met their requirements. You know, the thing I would add on top of that is that those requirements would be, you know, a composite of features they needed around, you know, other aspects of their both of their network and features they needed around, you know, wire network, as well as just around features they needed to build a service. And MCI's problem, right, was not wireless	01:53:00 01:53:03 01:53:04 01:53:14 01:53:17 01:53:22 01:53:26 01:53:30 01:53:33 01:53:39 01:53:41 01:53:43 01:53:47 01:53:52 01:53:55 01:53:55 01:53:58	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	once we introduced the partition feature. Q. When was that? A. I believe that was introduced in well, I know it was introduced before we went public in '99. So it would have been '98 or '97. You know, and that that feature was used a lot in sort of service layer like use cases where you're basically, you know, where you're basically trying to sell bandwidth to a bunch of subscribers. You know, the typical configuration for that was we would you know, you would allocate some sub net to that subscriber and then we would classify on behalf of the sub net and then we would map all of the traffic in that sub net to a particular partition and then we would manage bandwidth to that partition envelope. And then within that partition we could then also we could also provide secondary policy control. Q. Can you state with any more specificity as to when the partition feature was introduced? A. No, I just unfortunately I wish I could, actually.

7874 **BRETT GALLOWAY - 5/8/2013**

		102			104
01:54:31	1	know, we pretty much had a complete feature set, you	01:57:48	1	service is basically defined in terms of some sort of
01:54:36	2	know, you know, sort of that was sort of usable by	01:57:51	2	bandwidth spec. Again a very, very common use case.
01:54:39	3	a lot of customers by the end of '97. And then it	01:57:55	3	You can, you know, you buy DSL today. It's sold the
01:54:42	4	was sort of the end of '97 where we started	01:57:58	4	same way.
01:54:44	5	aggressively investing in sales and then, you know,	01:57:58	5	And that use case is the one that was
01:54:47	6	ramped up the size of the company and then over	01:58:04	6	constructively enabled by the partition feature where
01:54:50	7	the over '98 grew the company and then filed to	01:58:07	7	we could basically take a set of traffic and say for
01:54:55	8	go started preparing to go public at the end of	01:58:10	8	this class of traffic, you know, all of the all of
01:54:57	9	1998. So it's probable that we had that feature in	01:58:16	9	the flows together would share the bandwidth would
01:55:01	10	'97, by the end of '97.	01:58:21	10	share, you know, some aggregate share of bandwidth,
01:55:03	11	Q. Okay. With what degree of certainty can you	01:58:24	11	you know, inferior to the overall length that's
01:55:11	12	state, sitting here today, that the partition feature	01:58:34	12	sharing bandwidth.
01:55:14	13	was introduced by the end of '97?	01:58:35	13	You know, that isn't to say that, you know,
01:55:16	14	A. It would be in I want to do this	01:58:39	14	the pre-partitions, you know, that we would lack the
01:55:26	15	accurately. Probably 80 percent.	01:58:42	15	ability to provide quality of service on a wireless
01:55:38	16	Q. And are you aware of any documents that would	01:58:44	16	network, but we couldn't provide that capability of
01:55:42	17	corroborate your statement that with 80 percent	01:58:48	17	service definition based on bandwidth guarantees.
01:55:46	18	certainty the partition feature was introduced by the	01:58:54	18	Q. MR. ZOLOTOREV: In order to in this
01:55:49	19	end of '97?	01:59:02	19	hypothetical case of using the PacketShaper product
01:55:50	20	A. I don't have any documents. I mean, the	01:59:06	20	to allocate shared wireless bandwidth on a wireless
01:55:54	21	simplest way to ascertain that would just be copies	01:59:11	21	network, would the PacketShaper product be in some
01:55:57	22	of user, you know, you know, contemporaneous user	01:59:23	22	manner controlling the wireless base station?
01:56:05	23	documentation. We build user manuals. We updated	01:59:27	23	MS. DECAIRE: Object to the form.
01:56:09	24	them every release. Certainly by certainly we had	01:59:30	24	THE WITNESS: Commonly not. I mean, where
01:56:12	25	user manuals by the end of '97. So, you know, if one	01:46:23	25	you know, we given that the PacketShaper would sit
01:56:19	1	could find those user manuals, that would be the	01:59:43	1	behind the router or base station, and for these
01:56:21	2	simplest way to to determine that. I just	01:59:48	2	purposes they're you can sort of you can treat
01:56:25	3	didn't I didn't keep any of that stuff.	01:59:51	3	them as in combination. You know, it was not
01:56:27		Q. So it's fair to say you didn't in coming			
	4	Q. So it's fail to say you didn't lift confiling	01:59:53	4	uncommon that we would get requests for features
01:56:31	4 5	up with your answer, you didn't base that on any	01:59:53 01:59:57	4 5	uncommon that we would get requests for features where we would, you know, have features where we talk
01:56:31 01:56:34					
	5	up with your answer, you didn't base that on any	01:59:57	5	where we would, you know, have features where we talk
01:56:34	5 6	up with your answer, you didn't base that on any documentary evidence, correct?	01:59:57 02:00:00	5 6	where we would, you know, have features where we talk to the router and do some shared provide some
01:56:34 01:56:35	5 6 7	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of	01:59:57 02:00:00 02:00:04	5 6 7	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality.
01:56:34 01:56:35 01:56:38	5 6 7 8	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say	01:59:57 02:00:00 02:00:04 02:00:05	5 6 7 8	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those
01:56:34 01:56:35 01:56:38 01:56:44	5 6 7 8 9	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08	5 6 7 8 9	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and
01:56:34 01:56:35 01:56:38 01:56:44	5 6 7 8 9	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember.	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11	5 6 7 8 9	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial
01:56:34 01:56:35 01:56:38 01:56:44 01:56:47	5 6 7 8 9 10	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11	5 6 7 8 9 10	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias
01:56:34 01:56:35 01:56:38 01:56:44 01:56:47 01:56:48	5 6 7 8 9 10 11 12	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it — is it fair to say that prior to the release	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14	5 6 7 8 9 10 11	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find
01:56:34 01:56:35 01:56:38 01:56:44 01:56:47 01:56:48 01:56:53	5 6 7 8 9 10 11 12	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it is it fair to say that prior to the release of the partition feature the use case that you	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14 02:00:17 02:00:20 02:00:24 02:00:25	5 6 7 8 9 10 11 12	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do
01:56:34 01:56:35 01:56:38 01:56:44 01:56:47 01:56:48 01:56:53 01:56:57	5 6 7 8 9 10 11 12 13	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14 02:00:17 02:00:20 02:00:24	5 6 7 8 9 10 11 12 13	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that.
01:56:34 01:56:35 01:56:38 01:56:44 01:56:47 01:56:48 01:56:53 01:56:57 01:57:05	5 6 7 8 9 10 11 12 13 14	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it — is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be used to allocate shared bandwidth in a wireless	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14 02:00:17 02:00:20 02:00:29 02:00:29	5 6 7 8 9 10 11 12 13 14 15 16	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that. You know, to give you an example of that, you know, that's relevant to this particular use case of defining service levels, you know, the common
01:56:34 01:56:35 01:56:38 01:56:44 01:56:47 01:56:48 01:56:53 01:56:57 01:57:05 01:57:12	5 6 7 8 9 10 11 12 13 14 15	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it — is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be used to allocate shared bandwidth in a wireless network was not constructively enabled?	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:17 02:00:20 02:00:24 02:00:25 02:00:29 02:00:32 02:00:40	5 6 7 8 9 10 11 12 13 14 15 16 17	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that. You know, to give you an example of that, you know, that's relevant to this particular use case of defining service levels, you know, the common mechanism was used here was you did IP address or sub
01:56:34 01:56:38 01:56:44 01:56:47 01:56:48 01:56:53 01:56:57 01:57:05 01:57:12 01:57:14	5 6 7 8 9 10 11 12 13 14 15 16	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it — is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be used to allocate shared bandwidth in a wireless network was not constructively enabled? MS. DECAIRE: Object to the form.	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14 02:00:17 02:00:20 02:00:24 02:00:25 02:00:29 02:00:32 02:00:40 02:00:40	5 6 7 8 9 10 11 12 13 14 15 16 17 18	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that. You know, to give you an example of that, you know, that's relevant to this particular use case of defining service levels, you know, the common mechanism was used here was you did IP address or sub net classification. So sub net X is user X, sub net
01:56:34 01:56:38 01:56:44 01:56:47 01:56:48 01:56:53 01:56:57 01:57:05 01:57:12 01:57:14 01:57:16	5 6 7 8 9 10 11 12 13 14 15 16 17	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it — is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be used to allocate shared bandwidth in a wireless network was not constructively enabled? MS. DECAIRE: Object to the form. THE WITNESS: Sort of. So the use case that	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:17 02:00:20 02:00:24 02:00:25 02:00:29 02:00:32 02:00:40 02:00:40 02:00:45	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that. You know, to give you an example of that, you know, that's relevant to this particular use case of defining service levels, you know, the common mechanism was used here was you did IP address or sub net classification. So sub net X is user X, sub net Y is user Y, sub net Z is user Z. You hard code that
01:56:34 01:56:38 01:56:44 01:56:47 01:56:48 01:56:57 01:57:05 01:57:09 01:57:12 01:57:14 01:57:16 01:57:22	5 6 7 8 9 10 11 12 13 14 15 16 17 18	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be used to allocate shared bandwidth in a wireless network was not constructively enabled? MS. DECAIRE: Object to the form. THE WITNESS: Sort of. So the use case that I'm describing is a particular use case where you	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14 02:00:17 02:00:20 02:00:24 02:00:25 02:00:29 02:00:32 02:00:40 02:00:45 02:00:45	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that. You know, to give you an example of that, you know, that's relevant to this particular use case of defining service levels, you know, the common mechanism was used here was you did IP address or sub net classification. So sub net X is user X, sub net Y is user Y, sub net Z is user Z. You hard code that in the PacketShaper and it works.
01:56:34 01:56:38 01:56:44 01:56:47 01:56:48 01:56:57 01:57:05 01:57:09 01:57:12 01:57:14 01:57:22 01:57:26	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be used to allocate shared bandwidth in a wireless network was not constructively enabled? MS. DECAIRE: Object to the form. THE WITNESS: Sort of. So the use case that I'm describing is a particular use case where you have a PacketShaper, a router of some sort, you know,	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14 02:00:17 02:00:20 02:00:24 02:00:25 02:00:29 02:00:32 02:00:40 02:00:45 02:00:47 02:00:50	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that. You know, to give you an example of that, you know, that's relevant to this particular use case of defining service levels, you know, the common mechanism was used here was you did IP address or sub net classification. So sub net X is user X, sub net Y is user Y, sub net Z is user Z. You hard code that in the PacketShaper and it works. From an from an operational perspective
01:56:34 01:56:38 01:56:44 01:56:47 01:56:48 01:56:57 01:57:05 01:57:09 01:57:12 01:57:14 01:57:16 01:57:22 01:57:26 01:57:31	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be used to allocate shared bandwidth in a wireless network was not constructively enabled? MS. DECAIRE: Object to the form. THE WITNESS: Sort of. So the use case that I'm describing is a particular use case where you have a PacketShaper, a router of some sort, you know, and the router, again, as we've said earlier, could	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14 02:00:17 02:00:20 02:00:24 02:00:25 02:00:29 02:00:32 02:00:40 02:00:47 02:00:50 02:00:52	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that. You know, to give you an example of that, you know, that's relevant to this particular use case of defining service levels, you know, the common mechanism was used here was you did IP address or sub net classification. So sub net X is user X, sub net Y is user Y, sub net Z is user Z. You hard code that in the PacketShaper and it works. From an from an operational perspective that's cumbersome because, you know, sub nets can get
01:56:34 01:56:38 01:56:44 01:56:47 01:56:48 01:56:53 01:56:57 01:57:05 01:57:09 01:57:12 01:57:14 01:57:16 01:57:22 01:57:26 01:57:31 01:57:33	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	up with your answer, you didn't base that on any documentary evidence, correct? A. Correct. I base that on what I remember of our release cycles. I mean, I wish I could say certainly, but I'm trying not to overstate the things I remember. Q. You used the term constructively enabled, and is it is it fair to say that prior to the release of the partition feature the use case that you described where the PacketShaper product would be used to allocate shared bandwidth in a wireless network was not constructively enabled? MS. DECAIRE: Object to the form. THE WITNESS: Sort of. So the use case that I'm describing is a particular use case where you have a PacketShaper, a router of some sort, you know, and the router, again, as we've said earlier, could have, you know, wireless outboard links or wired	01:59:57 02:00:00 02:00:04 02:00:05 02:00:08 02:00:11 02:00:14 02:00:17 02:00:20 02:00:24 02:00:25 02:00:29 02:00:32 02:00:40 02:00:45 02:00:47 02:00:50	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	where we would, you know, have features where we talk to the router and do some shared provide some shared functionality. You know, we tended to strongly resist those because they were very, very situation dependent and therefore, you know, of limited commercial applicability. And so, you know, our strong bias from a product definition standpoint was try to find mechanisms that would work where we didn't have to do that. You know, to give you an example of that, you know, that's relevant to this particular use case of defining service levels, you know, the common mechanism was used here was you did IP address or sub net classification. So sub net X is user X, sub net Y is user Y, sub net Z is user Z. You hard code that in the PacketShaper and it works. From an from an operational perspective

7875 **BRETT GALLOWAY - 5/8/2013**

		174			17
04:10:36	1	A. About two and a half years.	04:13:20	1	actually closed first angel round of funding on
04:10:45	2	Q. Okay. So you left sometime around 1987, '88?	04:13:23	2	Valentine's Day 1996, and we sort of set up business
04:10:49	3	A. Early '88.	04:13:26	3	officially as employees two weeks or a week later
04:10:51	4	Q. Early '88. What did you do after Watkins	04:13:29	4	actually. I joined two weeks later. So that's the
04:10:57	5	Johnson?	04:13:32	5	point where I left Packeteer officially.
04:10:58	6	A. So I was recruited to go work at Metricom,	04:13:35	6	Q. Or left
04:11:02	7	which was a start-up. It was building solid state	04:13:37	7	A. I'm sorry. Left Metricom. Metricom actually
04:11:05	8	electric meters. I was recruited by a former	04:13:42	8	invested in our angel round. So they were an early
04:11:08	9	colleague at Watkins Johnson who had gone to work	04:13:45	9	investor with Packeteer.
04:11:13	10	there before I did.	04:13:46	10	Q. And how long were you at Packeteer?
04:11:13	11	Q. Who was that?	04:13:48	11	A. So I was at Packeteer from inception through
04:11:14	12	A. Bob Friday. And so then I subsequently	04:13:52	12	November of 2002.
04:11:20	13	joined Metricom. It's the same Metricom where we	04:13:52	13	Q. Okay. And where did you go in 2002?
04:11:24	14	much later ended up building Ricochet that we talked	04:13:56	14	A. I left to join Air Space as a CEO.
04:11:28	15	a great length about.	04:14:02	15	Q. Okay.
04:11:29	16	Q. Okay. In early 1988, what were your	04:14:03	16	A. Air Space was a wireless company. So back to
04:11:32	17	responsibilities when you first went to Metricom?	04:14:06	17	wireless ironically. And, coincidentally, one of the
04:11:35	18	A. I was a software engineer.	04:14:14	18	cofounders of Air Space was the same Bob Friday who
04:11:37	19	Q. Okay. At a high level, can you describe	04:14:19	19	had recruited me to Metricom. Air Space was
04:11:40	20	your your progression or the evolution of your job	04:14:24	20	developing a product which subsequent to my joining
04:11:43	21	at Metricom?	04:14:26	21	we shipped. It was an enterprise wireless LAN
04:11:45	22	Yes, I was a software engineer and then later	04:14:30	22	system.
04:11:48	23	I was promoted to a management position. I had a few	04:14:31	23	Q. Okay. All right. And was Air Space a
04:11:51	24	software engineers working for me. After that, I was	04:14:36	24	start-up?
04:11:54	25	promoted to director of software engineering, and	04:14:37	25	A. Yeah.
04:11:59	1	after that was promoted to director of engineering.	04:14:38	1	Q. And how long were you at Air Space?
				_	
04:12:02	2	Q. As a software engineer when you first started	04:14:41	2	A. So I was at Air Space through March of 2005.
04:12:02 04:12:08	2	Q. As a software engineer when you first started at Metricom, you were working on solid state electric	04:14:41 04:14:47		So I was at Air Space through March of 2005. Okay.
				2	
04:12:08	3	at Metricom, you were working on solid state electric	04:14:47	2	Q. Okay.
04:12:08 04:12:12	3 4	at Metricom, you were working on solid state electric meters. Did I understand that?	04:14:47 04:14:47	2 3 4	Q. Okay. A. That's when we closed the sale of the company
04:12:08 04:12:12 04:12:14	3 4 5	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state	04:14:47 04:14:47 04:14:50	2 3 4 5	Q. Okay. A. That's when we closed the sale of the company to Cisco.
04:12:08 04:12:12 04:12:14 04:12:18	3 4 5 6	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had they had before I got	04:14:47 04:14:47 04:14:50 04:14:51	2 3 4 5	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay.
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20	3 4 5 6 7	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had — they had before I got there designed a mesh packet radio network for	04:14:47 04:14:47 04:14:50 04:14:51 04:14:52	2 3 4 5 6 7	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24	3 4 5 6 7 8	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had — they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters	04:14:47 04:14:47 04:14:50 04:14:51 04:14:52 04:14:55	2 3 4 5 6 7 8	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right.
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27	3 4 5 6 7 8	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had — they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up	04:14:47 04:14:47 04:14:50 04:14:51 04:14:52 04:14:55 04:14:56	2 3 4 5 6 7 8	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32	3 4 5 6 7 8 9	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had — they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just	04:14:47 04:14:47 04:14:50 04:14:51 04:14:52 04:14:55 04:14:56 04:14:59	2 3 4 5 6 7 8 9	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business.
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32 04:12:35	3 4 5 6 7 8 9 10	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had — they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just meter reading to other — other industrial	04:14:47 04:14:47 04:14:50 04:14:51 04:14:52 04:14:55 04:14:56 04:14:59 04:15:01	2 3 4 5 6 7 8 9 10	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business. Q. Okay. And so you said of the wireless
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32 04:12:35 04:12:38	3 4 5 6 7 8 9 10 11	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just meter reading to other other industrial applications and actually and interfacing the	04:14:47 04:14:47 04:14:50 04:14:51 04:14:52 04:14:55 04:14:56 04:14:59 04:15:01 04:15:05	2 3 4 5 6 7 8 9 10 11	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business. Q. Okay. And so you said of the wireless networking business?
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32 04:12:35 04:12:38 04:12:40	3 4 5 6 7 8 9 10 11 12 13	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just meter reading to other other industrial applications and actually and interfacing the utilities to other devices in the distribution in	04:14:47 04:14:50 04:14:51 04:14:52 04:14:55 04:14:56 04:14:59 04:15:01 04:15:05	2 3 4 5 6 7 8 9 10 11 12 13	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business. Q. Okay. And so you said of the wireless networking business? A. Yeah.
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32 04:12:35 04:12:38 04:12:40 04:12:43	3 4 5 6 7 8 9 10 11 12 13	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just meter reading to other other industrial applications and actually and interfacing the utilities to other devices in the distribution in the distribution system, electricity distribution system.	04:14:47 04:14:47 04:14:50 04:14:51 04:14:55 04:14:56 04:14:59 04:15:01 04:15:05 04:15:07	2 3 4 5 6 7 8 9 10 11 12 13	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business. Q. Okay. And so you said of the wireless networking business? A. Yeah. Q. Okay. And then you left Cisco when? A. In November of 2011.
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32 04:12:35 04:12:38 04:12:40 04:12:43 04:12:44	3 4 5 6 7 8 9 10 11 12 13 14	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just meter reading to other other industrial applications and actually and interfacing the utilities to other devices in the distribution in the distribution system. Q. Okay.	04:14:47 04:14:47 04:14:50 04:14:51 04:14:55 04:14:55 04:14:56 04:15:01 04:15:05 04:15:07 04:15:09	2 3 4 5 6 7 8 9 10 11 12 13 14	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business. Q. Okay. And so you said of the wireless networking business? A. Yeah. Q. Okay. And then you left Cisco when? A. In November of 2011. Q. Okay.
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32 04:12:35 04:12:38 04:12:40 04:12:43 04:12:46 04:12:50	3 4 5 6 7 8 9 10 11 12 13 14 15	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had — they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just meter reading to other — other industrial applications and actually — and interfacing the utilities to other devices in the distribution — in the distribution system. Q. Okay. A. You know, subsequent to that, we ended up	04:14:47 04:14:50 04:14:51 04:14:52 04:14:55 04:14:56 04:14:59 04:15:01 04:15:05 04:15:06 04:15:07 04:15:09 04:15:12	2 3 4 5 6 7 8 9 10 11 12 13 14 15	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business. Q. Okay. And so you said of the wireless networking business? A. Yeah. Q. Okay. And then you left Cisco when? A. In November of 2011. Q. Okay. A. Before I you know, subsequent to joining
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32 04:12:35 04:12:38 04:12:40 04:12:40 04:12:40 04:12:50 04:12:51	3 4 5 6 7 8 9 10 11 12 13 14 15 16	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just meter reading to other other industrial applications and actually and interfacing the utilities to other devices in the distribution in the distribution system. Q. Okay.	04:14:47 04:14:47 04:14:50 04:14:51 04:14:55 04:14:55 04:14:56 04:14:59 04:15:01 04:15:05 04:15:06 04:15:09 04:15:12 04:15:13	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business. Q. Okay. And so you said of the wireless networking business? A. Yeah. Q. Okay. And then you left Cisco when? A. In November of 2011. Q. Okay. A. Before I you know, subsequent to joining Cisco, I was promoted to senior vice president
04:12:08 04:12:12 04:12:14 04:12:18 04:12:20 04:12:24 04:12:27 04:12:32 04:12:35 04:12:38 04:12:40 04:12:40 04:12:43 04:12:50 04:12:51 04:12:55 04:12:57	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	at Metricom, you were working on solid state electric meters. Did I understand that? A. Well, Metricom's business was solid state electric meters. We had — they had before I got there designed a mesh packet radio network for backhaul and meter reads from these electric meters back to headquarters. You know, we ended up generalizing the use of that network beyond just meter reading to other — other industrial applications and actually — and interfacing the utilities to other devices in the distribution — in the distribution system, electricity distribution system. Q. Okay. A. You know, subsequent to that, we ended up conceiving and building Ricochet. Q. Okay. And then after Metricom — I believe	04:14:47 04:14:47 04:14:50 04:14:51 04:14:55 04:14:55 04:14:56 04:14:59 04:15:01 04:15:05 04:15:06 04:15:07 04:15:09 04:15:12 04:15:13	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. Okay. A. That's when we closed the sale of the company to Cisco. Q. Okay. A. And so I then joined Cisco Q. All right. A as vice president and general manager of the wireless networking business. Q. Okay. And so you said of the wireless networking business? A. Yeah. Q. Okay. And then you left Cisco when? A. In November of 2011. Q. Okay. A. EXHIBIT 37

IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF DELAWARE

INTELLECTUAL	VENTURES I LLC and
INTELLECTUAL	VENTURES II LLC,

Plaintiffs,

v.

Case No. 1:11-cv-908-SLR

MOTOROLA MOBILITY LLC,

Defendant.

EXPERT REPORT OF DR. RANDY HOWARD KATZ REGARDING THE INVALIDITY OF U.S. PATENT NO. 7,409,450 router depicted above.² Thus, among other wireless access points that were available, a cable modem would have been an obvious choice as an access point to the Internet for the LAN. I further understand that Mr. Galloway agreed that such a configuration was not only obvious, but was almost certainly in use prior to the priority date of the '450 patent. Galloway Dep. Tr. at 147:6-22. Further, one of skill in the art would have been well aware using such a wireless access device would have necessarily required coupling the wireless access device, and consequently the Packet Shaper system, to a base station over a wireless bandwidth. Thus, it is my opinion that the Packet Shaper system discloses coupling the Packet Shaper system to a base station using a shared wireless bandwidth.

- 155. In view of the foregoing, it is my opinion that Packet Shaper discloses "coupling one or more subscriber customer premise equipment (CPE) stations with a base station over a shared wireless bandwidth using a packet-centric protocol" as recited in claim 1.
 - b. "allocating said wireless bandwidth and system resources based on contents of packets to be communicated over said wireless bandwidth, wherein the contents of each packet include a packet header and wherein the allocating is responsive to at least one field in the packet header."
- 156. Having reviewed the Packet Shaper materials, it is my opinion the Packet Shaper discloses "allocating said wireless bandwidth and system resources based on contents of packets to be communicated over said wireless bandwidth, wherein the contents of each packet include a packet header and wherein the allocating is responsive to at least one field in the packet header."
- 157. I understand that the Packet Shaper system was described, in part, in the Riddle Provisional and the Riddle Patent. *See*, *e.g.*, Riddle Provisional, 7:2-4; Galloway Dep. Tr. 242:1-246:25. The Packet Shaper system is a system for classifying data "flows" and allocating a portion of the available bandwidth to each flow:

² I note that the '450 Patent itself explains that one suitable type of wireless access router would be a cable modem: "IP flow 626 from CPE 294d at CPE subscriber location 306d can be transmitted to base station antenna 290d over a wireless medium such as, e.g., RF communication, **cable modem** and satellite communication, from subscriber antenna 292d coupled to CPE 294d at CPE subscriber location 306d." '450 Patent, 49, 9-14 (emphasis added).

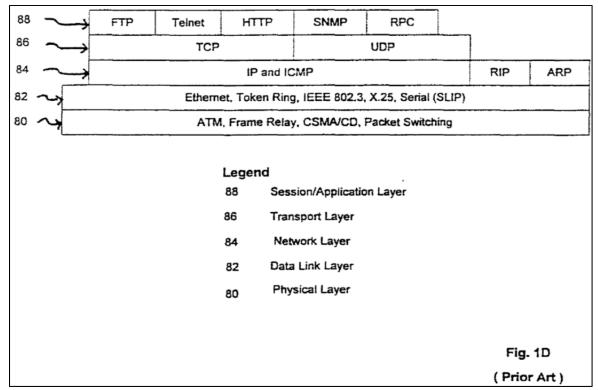

According to the invention, in a packet communication environment, a method is provided for automatically classifying packet flows for use in allocating bandwidth resources by a rule of assignment of a service level. The method comprises applying individual instances of traffic classification paradigms to packet network flows based on selectable information obtained from a plurality of layers of a multi-layered communication protocol in order to define a characteristic class, then mapping the flow to the defined traffic class.

Riddle Provisional, 5:29-6:2.

- 158. Packet Shaper explains that all of the TCP packets in a particular connection belong to the same "flow." Riddle Provisional, 8:7-9. For example, if a user uses her web browser to visit a particular web site, the web browser and the server hosting the web page will establish a TCP connection. Once the TCP connection is established, the web server will begin transmitting TCP packets to the user's web server using the TCP connection. In other words, while a number of TCP packets will be sent from the web page server to the user's browser, all of these TCP packets are part of the same TCP connection, and thus are part of the same flow. Similarly, all packets sent from the user's computer to the web server are in the same flow.
- 159. If the user is using a Packet Shaper system, the user's data flows over the Internet connection can be managed by the Packet Shaper system. As was described above, a single Internet connection can provide access to either a large number of computers, or to a large number of different flows from one or more computers. Thus, each of these flows contends for a portion of the bandwidth available on the Internet connection. As discussed above, one of the Packet Shaper system's primary functions is to allocate a portion of the bandwidth to each flow, or to prevent new flows if there is insufficient bandwidth. Packet Shaper User's Guide, v. 1.12 at BLUECOAT000181 to 186; *see also* Packet Shaper Data Sheet at MMI-IV1048886.
- 160. Packeteer discloses that data flows are identified by inspecting information within TCP or UDP packets. As quoted above, the Riddle Provisional discloses that "selectable information obtained from a plurality of layers of a multi-layered communication protocol in order to define a characteristic class, then mapping the flow to the defined traffic class." Riddle Provisional, 5:29-6:2. The Riddle Provisional further shows an example of a multi-layered communication protocol in Figure 1D:

Case 1:11-cv-00908-SLR-MPT Document 244-8 Filed 08/27/13 Page 65 of 79 PageID #: 7880

U.S. Patent No. 7,409,450 – Invalidity Expert Report

Riddle Provisional, Fig. 1D.

- 161. The Riddle Provisional explains that Figure 1D illustrates the "constituents of the Transmission Control Protocol/Internet Protocol (TCP/IP) protocol suite" and describes the physical layer, data link layer, network layer, transport layer, and the session or application layer. *Id.* at 12:31-14-14.
- 162. To classify data flows, any level of the TCP/IP protocol may be used. *Id.* at 15:26. For example, information about source and destination IP addresses, source and destination port information, application information, whether a flow is a TCP or UDP flow, URL information, etc. *Id* at 15:19-17:25 *et seq*; *see also* Packet Shaper User's Guide, v. 1.12 at BLUECOAT000180.

U.S. Patent No. 7,409,450 – Invalidity Expert Report

Traffic Class Components

Client Side	Server Side
IP Address/Domain Name	IP Address/Domain Name
	TCP or UDP Service, e.g. WWW, FTP, RealAudio, etc.
	URI for Web Service, e.g. "*.html", "*.gif", "/sales/*",
	etc.

Table 2

Riddle Provisional, 17:13-25.

- 163. As discussed previously, this information may be found in one or more levels of the protocol suite. For example, source and destination IP addresses and information about whether a flow is a TCP or UDP may be found in header of an IP packet. RFC 791 at MMI-IV1048321, 325. Information about a source or destination port number may be found in the header of a TCP packet. RFC 793 at MMI-IV1048374. Information about application type or URL information may be found in upper layer application-specific headers or payloads of application packets. See, e.g., Riddle Provisional, 15:26-16:5. For example, an HTTP packet would include URL information within the payload of the HTTP packet. Further, one of skill in the art would have understood that to transmit an HTTP packet over a TCP/IP connection, the HTTP packet is traditionally embedded as payload within a TCP packet, which is then embedded within the payload of an IP packet. See, e.g., Galloway Dep. Tr., 245:19-249:9.
- 164. Packet Shaper discloses that bandwidth may be allocated to different data flows by creating policies applicable to the different data flows:

Packeteer's PacketShaperTM allows you to proactively manage bandwidth allocation. PacketShaper lets you define and deliver specific *quality of service* levels for external users accessing your Web site and internal users accessing the Internet. By classifying traffic and assigning bandwidth management policies, you can offer users smooth, predictable service.

Case 1:11-cv-00908-SLR-MPT Document 244-8 Filed 08/27/13 Page 67 of 79 PageID #: 7882 *U.S. Patent No. 7,409,450 – Invalidity Expert Report*

Packet Shaper User's Guide, v. 1.12 at BLUECOAT000149 (emphasis in original); *see also* Riddle Provisional, 15:18-24:11.

165. In addition, Packet Shaper discloses:

PacketShaper can set *quality of service* levels for users. Each connection may have a guaranteed minimum bandwidth allocation. The allocation is adjusted so that connection activity is predictable. PacketShaper can also keep your access link from becoming a bottleneck. A new connection will not be permitted unless there is sufficient bandwidth to guarantee it a minimum rate through the link.

Packet Shaper User's Guide, v. 1.12 at BLUECOAT000149 (emphasis in original); *see also* Riddle Provisional, 15:18-24:11. Packet Shaper discloses that it uses traffic classes to manage bandwidth and resource allocation to different flows using various policies:

Managing the Traffic That Matters Most

PacketShaper allows you to set up *traffic classes* and assign appropriate bandwidth usage *policies* to those classes. A traffic class can be:

- A connection leading to or from a specific server or client such as all traffic generated by your Web server.
- Traffic generated by a specific application such as Web traffic (HTTP) or file transfer traffic (FTP).
- A subset of Web site traffic such as HTTP graphics (*.gif), video (*.mpeg) or directory (/sales/*).

PacketShaper lets you define and manage the traffic that concerns you most. Because PacketShaper is "web-aware," you can hone directly in on the portion of traffic for which you want to ensure quality of service.

Once you define a traffic class, you can set policies to limit its connection speeds. Different service levels may be specified for high-speed (ISDN and T-1) and low-speed (14.4 and 28.8 Kbps) users.

Packet Shaper User's Guide, v. 1.12 at BLUECOAT000149 (emphasis in original); *see also* Riddle Provisional, 15:18-24:11. These policies may classify flows according to various information "based on selectable information obtained from a plurality of layers of a multi-layered communication protocol in order to define a characteristic class, then mapping the flow to the defined traffic class." Riddle Provisional, 5:29-6:2. For example, the Packet Shaper User's Guide gives an example of creating a new traffic class:

Creating Traffic Classes

In the objectives we identified the traffic classes by application that we were most concerned with: Web traffic (HTTP), FTP and telnet. The following commands are used to create these classes:

class new outbound web_server BOTH 111.222.33.44:32:0 0:0:0

This command creates a traffic class "web_server," encompassing all of the outbound traffic for the server 111.222.33.44. The mask is 32, indicating that Packet Shaper User's Guide, v. 1.12 at BLUECOAT000194. *See also* Riddle Provisional, 24:13-26:8.

166. This portion of the Packet Shaper User's Guide discloses that outbound packets from web server having IP address 111.222.33.44 will be inspected for compliance with one or more policies (discussed in more detail below). As discussed above, IP address information is carried in the header of IP packets. Thus, to identify outbound packets associated with this new traffic class, the Packet Shaper system must inspect at least the IP packet header of outbound packets. In addition, this new class also specifies "port number" information, which is information carried in the TCP or UDP packet header:

111.222.33.x. The port value for web_server's traffic specification is 0 (zero). A zero means "match all," and therefore, in the example, means all traffic generated by server 111.222.33.44.

Packet Shaper User's Guide, v. 1.12 at BLUECOAT000195. *See also* Riddle Provisional, 24:13-26:8.

167. In addition, Packet Shaper discloses the creation of additional "child" traffic classes based on the new traffic class just created. These "child" traffic classes use the information from their "parent" traffic classes. Packet Shaper User's Guide, v. 1.12 at BLUECOAT000195. The Packet Shaper User's Guide, v. 1.12 discloses a number of child traffic classes based on the new parent traffic class described above. Specifically, it describes 5 separate child traffic classes:

U.S. Patent No. 7,409,450 – Invalidity Expert Report

class new web_server fast_html TCP 0:0:80 0:0:0 "*.htm*"

The class "fast_html" is URL-based. It consists of all outbound traffic with the suffix .htm or .html. The 80 specifies the port number for HTTP applications—that is, Web traffic. For other assigned port numbers, see "Well-Known Ports for Common Applications" on page 63.

class new web_server other_http TCP 0:0:80 0:0:0

The class "other_http" consists of all other HTTP traffic—basically the graphics portion of the server's outbound traffic, such as .gif and .jpeg files. The next command creates a traffic class "admin_ftp," which encompasses FTP files being transferred from the Web server to the system administrator's computer (111.222.33.99):

class new web_server admin_ftp tcp 0:0:20-21 111.222.33.99:32:0

The following command creates "admin_telnet," which encompasses telnet traffic being transferred from the Web server to the system administrator's computer.

class new web_server admin_telnet tcp 0:0:23 111.222.33.99:32:0

The following command creates an inbound traffic class "down_ftp." This class and "admin_ftp" will allow the system administrator to create policies for quick FTP file transfers between the administrator's computer and the Web server.

class new inbound down_ftp tcp 111.222.33.44:32:20-21 111.222.33.99:32:0

- 168. Packet Shaper User's Guide, v. 1.12 at BLUECOAT000195. *See also* Riddle Provisional, 24:13-26:8. The first of these traffic classes discloses that all outbound traffic with the suffix "*.htm" or "*.html" is covered by this traffic class. Suffix information is carried within TCP payloads and thus would require inspecting the payloads of TCP packets. *See also* Galloway Dep. Tr., 245:19-249:9.
- 169. Thus, Packet Shaper discloses allocating bandwidth based on information contained within headers, as well as payloads, of outbound packets, i.e. packets to be transmitted.
- 170. When allocating bandwidth, Packet Shaper also allocates system resources. For example, certain versions of Packet Shaper were limited to 2,000 simultaneous TCP connections, and 2,000 simultaneous UDP connections. Packet Shaper FAQ at MMI-IV1048890. When a

new TCP or UDP connection is established, Packet Shaper must allocate a portion of its connection capacity to the new connection.

- 171. Based on the foregoing, and the other Packet Shaper materials considered for this report, it is my opinion that Packet Shaper discloses "allocating said wireless bandwidth and system resources based on contents of packets to be communicated over said wireless bandwidth, wherein the contents of each packet include a packet header and wherein the allocating is responsive to at least one field in the packet header."
- 172. Therefore, it is my opinion that the Packet Shaper system as discussed above invalidates claim 1.

2. Claim 2

- 173. It is my opinion that Packet Shaper discloses each and every element of claim 2, and thus claim 2 is invalid.
 - 174. I have inserted claim 2 in its entirety below for reference:
 - 2. The method of claim 1, wherein said packet-centric protocol comprises transmission control protocol/internet protocol (TCP/IP).
- 175. Packet Shaper discloses that it operates on different data flows and it explicitly states that a data flow may be all packets in a TCP connection. Riddle Provisional, 8:7-9. In addition, as discussed above, the Riddle Provisional discusses that to perform its bandwidth and resource allocation function, it examines multiple layers of a multi-layered protocol. *Id* at 5:31-6:2. Riddle Provisional further discloses that one such multi-layered protocol may be the TCP/IP protocol. Further, the Riddle Provisional identifies TCP Service information as information used to identify traffic classes. Riddle Provisional, p. 17, Table 2. In addition, the Packet Shaper RSVP document emphases that Packet Shaper "[h]andles all TCP and UDP traffic especially adding value to Web traffic control." Packet Shaper RSVP at MMI-IV1048894; see also Controlling TCP.

- 206. As discussed above with respect to claim 6, Packet Shaper discloses that the packets to be communicated may be from a data network. Packet Shaper further discloses that the data network may be a local area network and a wired network. For example, Figure 1 from the Packet Shaper ISP document shows a wired LAN with multiple servers configured to transmit packets to the Internet using the Packet Shaper system. Thus, for data packets to be transmitted to the Internet, the packets to be communicated are from a wired LAN. In addition, as Mr. Galloway testified, when used in combination with the wireless Ricochet network, the data network may be a wireless network and, depending on the size of the Ricochet network, may be either a LAN or a WAN.
- 207. Thus, Packet Shaper discloses "wherein said data network comprises at least one of: a wireline network; a wireless network; a local area network; and/or a wide area network," and invalidates claim 7.

8. Claim 8

- 208. It is my opinion that Packet Shaper discloses each and every element of claim 8, and thus claim 8 is invalid.
 - 209. I have inserted claim 8 in its entirety below for reference:
 - 8. The method of claim 1, wherein said allocating is further based on a packet payload contents.
- 210. Packet Shaper discloses that in addition to examining packet headers, it may also perform "deep packet inspection" to identify information about the data flow, such as whether web pages, video files, or other data is being transmitted within the data flow. Such information is not found in a packet header, but rather is found within the payload of the packet. Packet Shaper discloses that the data gathered from the packet header and from the packet payload is used to classify the data flow and to allocate bandwidth to the data flow.
- 211. For example, source and destination IP addresses and information about whether a flow is a TCP or UDP may be found in header of an IP packet. RFC 791 at MMI-IV1048321, 325. Information about a source or destination port number may be found in the header of a TCP

Case 1:11-cv-00908-SLR-MPT Document 244-8 Filed 08/27/13 Page 72 of 79 PageID #: 7887

U.S. Patent No. 7,409,450 – Invalidity Expert Report

packet. RFC 793 at MMI-IV1048374. Information about application type or URL information may be found in upper layer application-specific headers or payloads of application packets. See, e.g., Riddle Provisional, 15:26-16:5. For example, an HTTP packet would include URL information within the payload of the HTTP packet. Further, one of skill in the art would have understood that to transmit an HTTP packet over a TCP/IP connection, the HTTP packet is traditionally embedded as payload within a TCP packet, which is then embedded within the payload of an IP packet. *See*, *e.g.*, Galloway Dep. Tr., 245:19-249:9.

212. For example, as discussed above, the Packet Shaper User's Guide, v. 1.12 discloses a number of child traffic classes based on the new parent traffic class described above. Specifically, it describes 5 separate child traffic classes:

U.S. Patent No. 7,409,450 – Invalidity Expert Report

class new web_server fast_html TCP 0:0:80 0:0:0 "*.htm*"

The class "fast_html" is URL-based. It consists of all outbound traffic with the suffix .htm or .html. The 80 specifies the port number for HTTP applications—that is, Web traffic. For other assigned port numbers, see "Well-Known Ports for Common Applications" on page 63.

class new web_server other_http TCP 0:0:80 0:0:0

The class "other_http" consists of all other HTTP traffic—basically the graphics portion of the server's outbound traffic, such as .gif and .jpeg files. The next command creates a traffic class "admin_ftp," which encompasses FTP files being transferred from the Web server to the system administrator's computer (111.222.33.99):

class new web_server admin_ftp tcp 0:0:20-21 111.222.33.99:32:0

The following command creates "admin_telnet," which encompasses telnet traffic being transferred from the Web server to the system administrator's computer.

class new web_server admin_telnet tcp 0:0:23 111.222.33.99:32:0

The following command creates an inbound traffic class "down_ftp." This class and "admin_ftp" will allow the system administrator to create policies for quick FTP file transfers between the administrator's computer and the Web server.

class new inbound down_ftp tcp 111.222.33.44:32:20-21 111.222.33.99:32:0

- 213. Packet Shaper User's Guide, v. 1.12 at BLUECOAT000195. *See also* Riddle Provisional, 24:13-26:8. The first of these traffic classes discloses that all outbound traffic with the suffix "*.htm" or "*.html" is covered by this traffic class. Suffix information is carried within TCP payloads and thus would require inspecting the payloads of TCP packets. When applying its traffic classes, Packet Shaper discloses allocating bandwidth based on information contained within headers of packets, as well as payloads of packets, of outbound packets, i.e. packets to be transmitted.
- 214. Thus, Packet Shaper discloses "wherein said allocating is further based on a packet payload contents," and therefore claim 8 is invalid.

Example Internet Datagram Header

Figure 4.

Note that each tick mark represents one bit position.

Version: 4 bits

The Version field indicates the format of the internet header. This document describes version 4.

IHL: 4 bits

Internet Header Length is the length of the internet header in 32 bit words, and thus points to the beginning of the data. Note that the minimum value for a correct header is 5.

[Page 11]

September 1981

Internet Protocol Specification

Type of Service: 8 bits

The Type of Service provides an indication of the abstract parameters of the quality of service desired. These parameters are to be used to guide the selection of the actual service parameters when transmitting a datagram through a particular network. Several networks offer service precedence, which somehow treats high precedence traffic as more important than other traffic (generally by accepting only traffic above a certain precedence at time of high load). The major choice is a three way tradeoff between low-delay, high-reliability, and high-throughput.

```
Bits 0-2: Precedence.

Bit 3: 0 = Normal Delay, 1 = Low Delay.

Bits 4: 0 = Normal Throughput, 1 = High Throughput.

Bits 5: 0 = Normal Relibility, 1 = High Relibility.
```

Ri+	6-7:	Reserved	for	Future	IIde
DIL	0 – 7 •	reserved	TOT	ruture	use.

	0	1	2	3	4	. 5 	6	7	
+-	PRE	ECEDENC	CE	 D 	+ T 	 R R	0	0	+
+-	+			+	+	++			+

Precedence

111 - Network Control

110 - Internetwork Control

101 - CRITIC/ECP

100 - Flash Override

011 - Flash

010 - Immediate

001 - Priority

000 - Routine

The use of the Delay, Throughput, and Reliability indications may increase the cost (in some sense) of the service. In many networks better performance for one of these parameters is coupled with worse performance on another. Except for very unusual cases at most two of these three indications should be set.

The type of service is used to specify the treatment of the datagram during its transmission through the internet system. Example mappings of the internet type of service to the actual service provided on networks such as AUTODIN II, ARPANET, SATNET, and PRNET is given in "Service Mappings" [8].

[Page 12]

September 1981

Internet Protocol Specification

The Network Control precedence designation is intended to be used within a network only. The actual use and control of that designation is up to each network. The Internetwork Control designation is intended for use by gateway control originators only. If the actual use of these precedence designations is of concern to a particular network, it is the responsibility of that network to control the access to, and use of, those precedence designations.

Total Length: 16 bits

Total Length is the length of the datagram, measured in octets, including internet header and data. This field allows the length of a datagram to be up to 65,535 octets. Such long datagrams are impractical for most hosts and networks. All hosts must be prepared to accept datagrams of up to 576 octets (whether they arrive whole or in fragments). It is recommended that hosts only send datagrams larger than 576 octets if they have assurance that the destination is prepared to accept the larger datagrams.

The number 576 is selected to allow a reasonable sized data block to be transmitted in addition to the required header information. For example, this size allows a data block of 512 octets plus 64 header octets to fit in a datagram. The maximal internet header is 60 octets, and a typical internet header is 20 octets, allowing a margin for headers of higher level protocols.

Identification: 16 bits

An identifying value assigned by the sender to aid in assembling the fragments of a datagram.

Flags: 3 bits

Various Control Flags.

Bit 0: reserved, must be zero
Bit 1: (DF) 0 = May Fragment, 1 = Don't Fragment.
Bit 2: (MF) 0 = Last Fragment, 1 = More Fragments.

Fragment Offset: 13 bits

This field indicates where in the datagram this fragment belongs.

[Page 13]

Case 1:11-cv-00908-SLR-MPT Document 244-8 Filed 08/27/13 Page 79 of 79 PageID #: 7894

September 1981

Internet Protocol Specification

The fragment offset is measured in units of 8 octets (64 bits). The first fragment has offset zero.

Time to Live: 8 bits

This field indicates the maximum time the datagram is allowed to remain in the internet system. If this field contains the value zero, then the datagram must be destroyed. This field is modified in internet header processing. The time is measured in units of seconds, but since every module that processes a datagram must decrease the TTL by at least one even if it process the datagram in less than a second, the TTL must be thought of only as an upper bound on the time a datagram may exist. The intention is to cause undeliverable datagrams to be discarded, and to bound the maximum datagram lifetime.

Protocol: 8 bits

This field indicates the next level protocol used in the data portion of the internet datagram. The values for various protocols are specified in "Assigned Numbers" [9].

Header Checksum: 16 bits

A checksum on the header only. Since some header fields change (e.g., time to live), this is recomputed and verified at each point that the internet header is processed.

The checksum algorithm is:

The checksum field is the 16 bit one's complement of the one's complement sum of all 16 bit words in the header. For purposes of computing the checksum, the value of the checksum field is zero.

This is a simple to compute checksum and experimental evidence indicates it is adequate, but it is provisional and may be replaced by a CRC procedure, depending on further experience.

Source Address: 32 bits

The source address. See section 3.2.

Destination Address: 32 bits

The destination address. See section 3.2.

[Page 14]
